

Luber-finer has made a new design change to this quality performance product

Subject: L9684F

Profile Comparison: New Design vs. Previous Design

Features & Benefits:

- Provides performance that is equivalent to the product the customer is used to receiving in a slightly different package.
- Easy and trouble-free filter replacement for reduced downtime
- Provides ultimate fuel cleaning protection

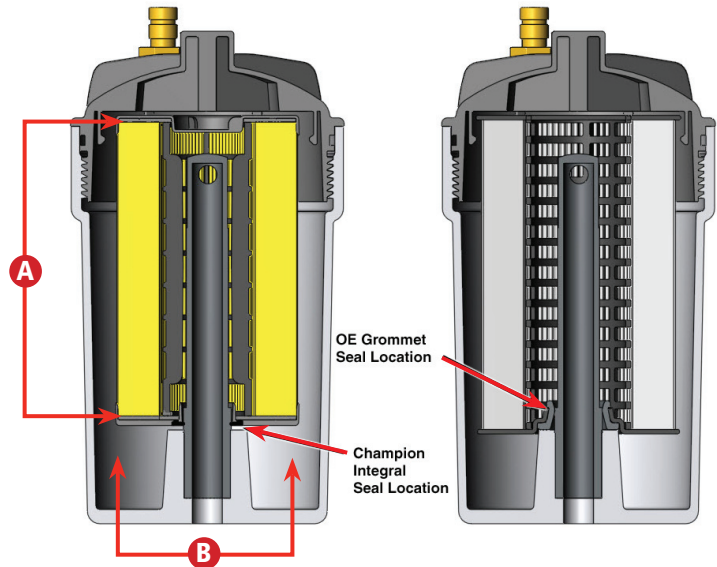

Product Applications:

2002-2010 International 4000, 7000, & 8000 series trucks

Cross References:

Baldwin BF7779, Donaldson P550657, Fleetguard FS19684E, Wix 33719

OEM #: International 1842638C91

New integral seal replaces OE grommet seal thus creating a shorter profile by 0.120"

Special Notes:

- A** The overall height of the L9684F is now approximately .120" shorter than the previous filter. This is due to the use of a seal that is integral to the open end cap instead of a grommet. The sealing diameter is still located at the appropriate elevation to provide a proper seal in the housing.
- B** Additionally the closed end of the filter element is now the same diameter as the open end. This will not affect the performance of the filter in the application however the filter no longer snaps into the housing cap for installation and removal. The overall filter diameter is smaller than the OEM filter as well.

Engine and equipment manufacturer's warranties remain in effect when Luber-finer filters are used.
